Bio:
In the years I have taught and practiced at UC San Diego (and for a time in the community), I have seen countless improvements in the care of kidney patients. Our understanding of kidney diseases and dialysis management has never been better. At the same time, our ability to prevent kidney transplant failure has markedly improved. We now better understand the risks of living kidney donation. Working with the transplant team at UCSD, and with others across the country, has helped us to successfully address these issues.

Bio:
Natalie Afshari, MD is accomplished as a clinician, surgeon, and a research scientist. Dr. Afshari’s achievement in cornea and refractive surgery and overall patient care has been recognized by her peers in several of the “best doctors” lists, including “The Best Doctors in America” in each listing for the past decade. Furthermore, Dr. Afshari was awarded the academic Achievement Award and the Secretariat Award by the American Academy of Ophthalmology. The U.S. Food and Drug Administration (FDA) has consulted Dr. Afshari’s expertise for matters of safety and efficacy of various ophthalmologic treatments. The National Institutes of Health (NIH) has honored Dr. Afshari by awarding her and her collaborators extensive grant support to study Fuchs endothelial corneal dystrophy, a genetic disorder leading to corneal transplantation.

Bio:
Dr. Brown is world renown for his contributions to basic and clinical research of the cornea, and has many “firsts.” He was the first to initiate studies into the surface characteristics of the component of the pre-corneal tear film, was the first to implicate that collagenase was responsible for corneal ulcers after alkali burn, and was the first to develop a collagen research laboratory for the eye and to initiate biochemical and cell biological studies on the structural macromolecules of the cornea. Dr. Brown was also the first to show that severely alkali-burned cornea can be successfully transplanted, resulting in many patients across the world to see whereas this was once considered a hopeless condition. Over thirty years ago, he developed corneal transplantation in babies born blind from corneal opacities. Since few surgeons in the world feel comfortable with this complicated procedure, infants and children from all over the world come to Shiley Eye Institute for their care.
