**Bio:**
Dr. Brown is world renown for his contributions to basic and clinical research of the cornea, and has many “firsts.” He was the first to initiate studies into the surface characteristics of the component of the pre-corneal tear film, was the first to implicate that collagenase was responsible for corneal ulcers after alkali burn, and was the first to develop a collagen research laboratory for the eye and to initiate biochemical and cell biological studies on the structural macromolecules of the cornea. Dr. Brown was also the first to show that severely alkali-burned cornea can be successfully transplanted, resulting in many patients across the world to see whereas this was once considered a hopeless condition. Over thirty years ago, he developed corneal transplantation in babies born blind from corneal opacities. Since few surgeons in the world feel comfortable with this complicated procedure, infants and children from all over the world come to Shiley Eye Institute for their care.

New Patient Registration: (800) 926-8273
Direct Clinic Line: (858) 534-6290

Bio:
In 1996, Dr. Goldbaum published a report on the first known case of a newborn with E-Coli Endophthalmitis, resulting in inflammation of the internal structures of the tissues in the eyeball. Dr. Goldbaum’s breakthrough in treatment for macular hole was featured in 1998 issues of Ocular Surgery News and the journal, Ophthalmology. The technique using silicone oil has the potential of greatly altering the treatment of macular holes worldwide.
