Dr. Brown was also the first to show that severely alkali-burned cornea can be successfully transplanted, resulting in many patients across the world to see whereas this was once considered a hopeless condition. Over thirty years ago, he developed corneal transplantation in babies born blind from corneal opacities. Dr. Goldbaum's breakthrough in treatment for macular hole was featured in 1998 issues of Ocular Surgery News and the journal, Ophthalmology. The technique using silicone oil has the potential of greatly altering the treatment of macular holes worldwide.
