UC San Diego Health Physician Directory

Our physicians are recognized leaders in their professional societies, heading national organizations and committees dedicated to improving care and advancing knowledge about disease. They are prominently listed in publications such as America's Top Doctors and *U.S. News & World Report*'s rankings of outstanding physicians and clinical programs.

Patient Access

Request an Appointment
Whether you’re looking for a primary care physician (PCP), need a specialist for treatment or are seeking a second opinion, you can make an appointment by following the steps below:

- **New Patients** *(who have never seen a UC San Diego Health provider)*
  To register as a new patient and schedule an appointment, call **800-926-8273**, Monday through Friday, 8 a.m. to 5 p.m.

- **Current Patients**
  Contact your physician’s office directly to schedule an appointment or call the main switchboard number, **858-657-7000**, and ask to be transferred to your physician’s office.

- **Find a Doctor**
  To use our physician search website to find a physician by name or to search for a specialist, visit: doctors.ucsd.edu.

Referring Physician Access

Transfer a Patient
For hospital-to-hospital transfers, call **619-543-5709** (24-hour service) for instructions or to speak to a transfer coordinator.

Consultations
If you need to talk with one of our physicians about a case or if you have any problems or concerns, please contact us at **855-543-0555** from 8 a.m. to 5 p.m. We want to hear from you.

Refer Your Patient
Call Physician Access at **855-543-0555** or fax **888-539-8781** and our team will register and schedule your referred patient. You will receive follow-up communication (consultation notes, discharges, etc.), as well as access to our electronic medical record system, UCSD Link.

Bio:
Dr. Schwab is a hematologist/oncologist specializing in the treatment of patients with breast cancer. As needed Dr. Schwab treats women with endocrine therapy and/or chemotherapy. These treatments can be used to reduce the risk of breast cancer spreading to other parts of the body and can help allow for breast conserving surgery. These medications can also be used to improve the lives of patients with breast cancer that has spread elsewhere in the body. Dr. Schwab is an active researcher and he attempts to scientifically apply the latest advances in cancer research to the benefit of his patients.

As a physician, I strongly believe that we need better and more advanced therapies to treat cancer, but I also feel it is very important to carefully tailor the treatment to the individual patient. There is an increasing array of options for treatment for cancer including chemotherapy, targeted therapies, surgery and radiation and many patients need a combined and coordinated strategy that may include several of these options to achieve the optimal results. We have excellent surgeons and radiation therapists at UC San Diego Healthcare and we work closely as a team to provide the best possible care for our patients.

As a physician, I strongly believe that we need better and more advanced therapies to treat cancer, but I also feel it is very important to carefully tailor the treatment to the individual patient. There is an increasing array of options for treatment for cancer including chemotherapy, targeted therapies, surgery and radiation and many patients need a combined and coordinated strategy that may include several of these options to achieve the optimal results. We have excellent surgeons and radiation therapists at UC San Diego Healthcare and we work closely as a team to provide the best possible care for our patients.

Our laboratory focuses on the role that microbial communities play in human homeostasis, health and disease. We firmly believe that the various microbial components of human ecosystems including bacteria, viruses, archaea, and fungi are important factors that help determine the natural history of their hosts. Furthermore, their interactions with humans or their interactions with other microbial constituents in these communities likely have consequences for human health.

In the years I have taught and practiced at UC San Diego (and for a time in the community), I have seen countless improvements in the care of kidney patients. Our understanding of kidney diseases and dialysis management has never been better. At the same time, our ability to prevent kidney transplant failure has markedly improved. We now better understand the risks of living kidney donation. Working with the transplant team at UCSD, and with others across the country, has helped us to successfully address these issues.

**Stuart Brown, MD**
Professor of Ophthalmology

**Specialty:** Ophthalmology  
**Subspecialty:** Cornea

**Shiley Eye Institute**

**Bio:**
Dr. Brown is world renown for his contributions to basic and clinical research of the cornea, and has many "firsts." He was the first to initiate studies into the surface characteristics of the component of the pre-corneal tear film, was the first to implicate that collagenase was responsible for corneal ulcers after alkali burn, and was the first to develop a collagen research laboratory for the eye and to initiate biochemical and cell biological studies on the structural macromolecules of the cornea. Dr. Brown was also the first to show that severely alkali-burned cornea can be successfully transplanted, resulting in many patients across the world to see whereas this was once considered a hopeless condition. Over thirty years ago, he developed corneal transplantation in babies born blind from corneal opacities. Since few surgeons in the world feel comfortable with this complicated procedure, infants and children from all over the world come to Shiley Eye Institute for their care.

His investigative interests are focused on the natural history of deep venous thromboembolic disease. These activities have resulted in research efforts examining the acute, high permeability lung injury experienced by patients following surgical removal of their chronic thromboembolic pulmonary vascular lesions. Dr. Auger is also pursuing investigations involving direct visualization and imaging of pulmonary thromboembolic disease.

Bio:
Dr. Firestein's research efforts have focused on the pathogenesis of rheumatoid arthritis (RA). His laboratory helped define the synovial cytokine profile of RA and demonstrated the dominance of macrophage and fibroblast products as opposed to the expected T cell cytokines. These studies contributed to the development of the highly effective anti-TNF approaches in RA. Recently, Dr. Firestein has focused his attention on synoviocyte transformation in RA as a mechanism of joint destruction. His group was the first to describe somatic mutations in the p53 tumor suppressor genes in the RA synovium. The mutations were subsequently demonstrated to be dominant negative and increased the cartilage invasiveness of these cells. Dr. Firestein's laboratory has also worked extensively on metalloproteinase and cytokine gene regulation in synoviocytes by MAP kinases and NF-κB as well as on novel gene therapy approaches to RA.

Bio:  
In the years I have taught and practiced at UC San Diego (and for a time in the community), I have seen countless improvements in the care of kidney patients. Our understanding of kidney diseases and dialysis management has never been better. At the same time, our ability to prevent kidney transplant failure has markedly improved. We now better understand the risks of living kidney donation. Working with the transplant team at UCSD, and with others across the country, has helped us to successfully address these issues.
